Psychology

The Psychology major is a way to gain understanding of yourself and others through the study of the social, developmental, cognitive, and biological causes of behavior. The department prides itself on providing students with an applied approach to psychology through the study of current research and theories in the field. Psychology majors select one of four concentrations: General Psychology, Expressive Therapies, Human Services or Organizational Psychology. Psychology students learn psychological theory and conduct practical research with community partners. They participate in service-learning projects and off-campus learning experiences, as well as intern at a number of local organizations and schools. In the research practicum, students work with community partners to design and implement a research project. Through this action-oriented and experiential class, students work collaboratively and gain invaluable experience in the community.

Biology

A Bachelor's Degree in Biology provides a foundational understanding of biology and chemistry within the context of a liberal arts education. Students develop knowledge in Biology and related sciences while strengthening their competence in critical thinking, integrated learning, oral and written communication, and collaboration. A Biology Degree from Pine Manor is the successful choice for students interested in careers in clinical healthcare or the biomedical sciences. Students achieve a foundational understanding of the principles that govern living systems and learn to access and critically read the scientific literature. They also gain practical experience through course labs taught by Pine Manor faculty and area research scientists and through the Pine Manor internship program.

Business & Management

The Business & Management degree has a dual focus. First, our program increases students' competence as business people, i.e. learning to lead a product or service enterprise. This involves developing knowledge and skills in a variety of business areas such as entrepreneurship, marketing, sales, production, human resources, accounting, finance, and distribution. The second focus is to develop greater management ability. This applies to profit-making companies, and non-profit, healthcare, voluntary and government organizations. The emphasis of management is enhancing productivity through the creation of a high-performance organizational culture, which includes the skills of planning, motivating people, communicating effectively, analyzing problems, making decisions, and team collaboration. Global business and adapting to a changing world are integrated into the program.

English: Creative Writing & Literature

The English: Creative Writing & Literature Program

focuses on the relationships between literature and creative writing. The English faculty are all published writers who serve as role models and mentors for students. English majors prepare for careers in which professional writing and cultural knowledge are essential.

Recent graduates work in the legal profession, education, publishing, media, public relations, advertising, education administration, and theatre. English majors create portfolios of professional writing at their Senior Internship sites. As evidence of their competence in both writing and literary study, majors submit either an Advanced Creative Writing Portfolio or a Literary Assessment Paper.

Early Childhood: Education, Health & Leadership

Pine Manor College provides students an opportunity to learn about the important, distinct, and unique period of development that is Early Childhood. Students will be provided the opportunity to prepare for a variety of Early Childhood career paths from their studies in children's cognitive, physical and social-emotional development. Students take course work that addresses child development theories, educational practices, assessment, pedagogical approaches, English Language learners, program planning, health and nutritional issues unique to children, and early childhood after school programs and community resources. Students may also choose from a variety of electives in order to pursue a particular area of interest relating to children. Students in the program will be provided many opportunities to observe and work with young children.

Sociology & Political Science

The Major in Sociology and Political Science (SPS) at Pine Manor College integrates sociology and political science into a single program of study. It has a central set of courses that emphasize understanding social and political systems from the neighborhood to the world. We see the place in all communities for activism and leadership. Core courses provide both foundational learning and common experiences integrating and applying learning in the major.

SPS majors complete one of four tracks, through which they integrate and define what the major means for them: Politics and Policy; Criminal Justice; Sociology; or International Development. SPS graduates are prepared for entry into a variety of fields, including law enforcement and other aspects of the criminal justice system, human services, politics and community organizing, or work in international business and development.

pmc.edu

Community Health

The greatest need in the field of **Community Health** is for people connected to diverse communities, rooted in these relationships, with linguistic and cultural skills. Our Community Health Major is designed to emphasize "competencies" in addition to specific knowledge gained from course work. Employers are eager to see what students can do, as they apply basic knowledge. On the basis of this evolving understanding, we have designed this major to be built on a small core of key courses that provide those specific knowledge needs, combined with a minor in one of many existing areas in the college curriculum. The goal is for students to gain a coherent knowledge through the core, but in the choice of the minor they decide the specific focus of their approach to issues in community health, and thus hone applicable skills. The public health core functions of assessment, policy development and assurance guide the majors in achieving foundational knowledge.

Performing Arts

Performing Arts at Pine Manor College encompasses Music, Dance, and Theatre, offering a variety of courses that teach skills useful for all career paths, and presenting students with important outlets for creativity and expression as well as numerous performance opportunities. The Associate in Arts Degree in Performing Arts allows students to study the three disciplines together, providing a coherent learning experience. Courses in performance, technique, practice, history, literature, and theory impart appreciation and training. Directed studies in areas of interest are possible; an exploratory internship in one of the three fields is recommended. Students may develop a self-designed major in the Performing Arts.

Communication

The media, from television and film to Facebook and Twitter, occupies a central position in most of our lives. Yet we don't often think about how we can use it and how it is using us. The Communication program at Pine Manor will challenge you to think critically about the media and will help you develop the tools to create a wide variety of media and social media content. The communication skills you develop will be vital for most career paths you might follow. Our graduates have gone on to find employment in network and local television, radio, advertising agencies, publishing houses, public relations firms, newspapers, film production companies, non profit organizations and higher education.

Visual Arts

The Visual Arts major at Pine Manor College enables a student to emphasize either studio arts or art history in a self-designed type of major. A student takes a small number of required courses in these subjects, including a senior internship seminar and a senior thesis project, and selects one of two tracks in the major. A student and her advisor work very closely to select the electives in the major based on her interests and career goals. In addition, a student is also encouraged to take a broad range of courses outside the major which will complement her interests and career goals. A student may also register at nearby Boston College for additional courses. Creative thinking is at the core of the Visual Arts curriculum. Students develop creative and critical thinking skills in visual expression and writing, as well as a broad range of studio and design skills that will serve them well in the work-place.
